## Section I. Chemical Product and Company Identification

**PRODUCT NAME/ TRADE NAME**
Ammonium Nitrate, Prills

**SYNONYM**
Prilled Ammonium Nitrate (PAN), Low Density Ammonium Nitrate (LDAN)

**CHEMICAL NAME**
Ammonium Nitrate

**CHEMICAL FAMILY**
Nitrate Salt. (Oxidizing agent)

**CHEMICAL FORMULA**
NH₄NO₃

**MATERIAL USES**

**MANUFACTURER**
Apache Nitrogen Products, Inc.
P. O. Box 700
Benson, AZ 85602
Fax (520) 720-4158
www.apachenitro.com

**SUPPLIER**
Apache Nitrogen Products, Inc.
P. O. Box 700
Benson, AZ 85602
Fax (520) 720-4158
www.apachenitro.com

**24 Hour Emergency Telephone Number:**
(520) 720-2150
(Ask for the Shift Supervisor)
CHEMTREC 1-800-424-9300

## Section II. Hazardous Ingredients

**NAME**
Ammonium Nitrate

**CAS #**
6484-52-2

**Exposure Limits (ACGIH)**

<table>
<thead>
<tr>
<th>NAME</th>

**Other Information on Ingredients:**
Treat as nuisance dust at concentration of 5mg/m³ or higher.

## Section III. Hazards Identification

### POTENTIAL ACUTE HEALTH EFFECTS

May interfere with the oxygen carrying capacity of the blood if ingested in large quantities or over a prolonged period of time. Persons with anemia, bowel diseases, or infants, are more likely to develop effects. Over-exposure by ingestion is unlikely under normal working conditions. Inhalation of dusts may cause respiratory irritation. This product may irritate eyes and skin upon contact but is unlikely to injure tissue.

Symptoms of overexposure may include:
- Cardiovascular: methemoglobinemia, low blood pressure (hypotension), irregular heart beat (arrhythmia), shock (vasodilation)
- CNS: headache, dizziness, generalized tingling sensation (paresthesia)
- Gastrointestinal: nausea, vomiting, diarrhea, abdominal pain
- Eye: redness and inflammation (conjunctivitis)
- Skin: bluish discoloration (cyanosis) with profuse sweating following ingestion or irritation and flushed skin following contact with moist skin surfaces.
Section III. Hazards Identification

POTENTIAL CHRONIC HEALTH EFFECTS
CARCINOGENIC EFFECTS: NONE by ACGIH, EPA, IARC, NTP, OSHA.
MUTAGENIC EFFECTS: NONE by ACGIH, EPA, IARC, NTP, OSHA.
TERATOGENIC EFFECTS: NONE by ACGIH, EPA, IARC, NTP, OSHA.

Repeated or prolonged overexposure by ingestion can reduce the oxygen carrying capacity of the blood producing anoxia in infants or individuals with preexisting bowel or blood diseases. Ensure that nitrate containing fertilizers are not applied near wells where contamination may occur. Consult your agronomist regarding the advisability and precautions for use of nitrate fertilizers on fruit or vegetable crops.

If breathing fumes of decomposition, a sensation of tightness, burning of the chest and shortness of breath may occur in 6-48 hours.

ROUTE(S) of ENTRY
Inhalation – Yes Skin – Yes Ingestion - Yes

Section IV. First Aid Measures

EYE CONTACT
Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Obtain medical attention if irritation persists.

MINOR SKIN CONTACT
May cause skin irritation. Wash contaminated skin with soap and water. Cover dry or irritated skin with a good quality skin lotion. If irritation persists, seek medical attention.

EXTENSIVE SKIN CONTACT
No additional information.

MINOR INHALATION
Inhalation of dust may produce irritation, burning, sneezing and coughing. Long term exposure may cause headache, nausea or weakness. Loosen tight clothing. Allow affected persons to rest in a well ventilated area. Obtain medical attention if irritation persists.

SEVERE INHALATION
In emergency situations use proper respiratory protection to evacuate affected individuals to a safe area as soon as possible. Loosen tight clothing around the person's neck and waist. Oxygen may be administered if breathing is difficult. If the person is not breathing, perform artificial respiration. Obtain immediate medical attention.

SLIGHT INGESTION
Have conscious person drink several glasses of water or milk. Induce vomiting. Lower the head so that the vomit will not reenter the mouth and throat. NEVER give an unconscious person anything to drink. Obtain medical attention.

EXTENSIVE INGESTION
No additional information.

Section V. Fire and Explosion Data

THE PRODUCT IS Non-flammable.
AUTO-IGNITION TEMPERATURE Not applicable.
FLASH POINT Not applicable.
FLAMMABILITY LIMITS Not applicable.
PRODUCTS OF COMBUSTION Material will not burn, but thermal decomposition may result in flammable/toxic gases being formed. These products are nitrogen oxides and ammonia (NO, NO2, NH3).
FIRE HAZARD IN THE PRESENCE OF VARIOUS SUBSTANCES Not applicable.
EXPLOSION HAZARD IN THE PRESENCE OF VARIOUS SUBSTANCES Oxidizer. Material is an oxidizer which may react readily with other materials, especially upon heating. In confinement and in the presence of a strong detonation source, the material can explode when subject to sudden shock, pressure, or high temperature. Avoid temperatures above 210°C (410 OF) which may cause thermal decomposition or explosion, especially in confined or poorly ventilated spaces. Incompatible with sulfur, chlorides, reducing agents, or other oxidizers. Incompatible with finely powdered metals (cadmium, copper, lead, cobalt, nickel, bismuth, chromium, magnesium, zinc, sodium, potassium and aluminum).

FIRE FIGHTING MEDIA AND INSTRUCTIONS
Oxidizing material. Cool containing vessels, bins or buildings with water jets in order to prevent pressure build-up, or explosion. Establish unmanned monitors and apply flooding quantities of water. Withdraw to a safe location. Evacuate surrounding area. Material will not burn. Undergoes thermal decomposition at elevated temperatures to release toxic and combustible gases (ammonia, carbon dioxide, and oxides of nitrogen). If fumes or gases are present, fire fighters should wear self contained breathing apparatus.

SPECIAL REMARKS ON FIRE HAZARDS
Material supports combustion. Powerful oxidizing agent supports combustion by liberating oxygen even if smothered. Avoid temperatures above 210°C (410°F) in confined or poorly ventilated spaces. Explosive when exposed to heat or flame under confinement. Avoid pressure build-up. Thermal decomposition or explosion may result. Ventilate to cool and flood with water to stop decomposition reaction. Contain and collect all runoff for treatment. Prevent fire water from reaching water courses or aquifers.
Section V. Fire and Explosion Data

SPECIAL REMARKS ON EXPLOSION HAZARDS

Industry studies have proposed the following rules for blends of ammonium nitrate with phosphate and potassium containing fertilizers:

a) Ammonium nitrate fertilizers are reported not to detonate unless the fertilizer contains at least 70% ammonium nitrate, unless ammonium sulfate is present in the blend. Blended ammonium nitrate - ammonium sulfate fertilizers may detonate with as little as 45% ammonium nitrate present.

b) It has been reported that it is desirable to keep the ammonium to nitrate ratio above 1.5 in fertilizer blends in order to minimize toxic gas release during "cigar burn" fires.

c) "Cigar burn" is considered to be a hazard primarily when the ammonium nitrate content of a blend is between 20-40%. Cigar burn is a rare phenomenon which requires the combustion of a separate combustible material such as sulfur which can cause thermal decomposition of nearby ammonium nitrate.

Note - Dry Ammonium Nitrate, of any grade, when contaminated with oil, charcoal, and other organic substances and flammable liquids, should be considered an explosive, capable of detonation by combustion, or by explosion of adjacent explosives.

Section VI. Accidental Release Measures

SMALL SPILL

Use appropriate tools to put the spilled solid in a convenient container for reuse or disposal.

LARGE SPILL

In the event of a spill, prevent additional discharge of material, if possible to do so without hazard. Prevent spills from entering sewers, watercourses, wells, etc. Product will promote algae growth which may degrade water quality and taste. Notify downstream water users. Nitrate in potable drinking water should be maintained below 10 mg/L. Will dissolve and disperse in water. Put the material into suitable container for reuse or disposal.

Section VII. Handling and Storage

PRECAUTIONS

Keep away from heat, combustible materials, and reducing agents. Avoid contact with skin and eyes. Do not ingest or breathe dust. Take precautions against electrostatic discharges. Keep out of reach of children. Keep away from food, drink and animal feed. Notify police and fire departments for assistance. Comply with all federal, state and/or local rules and regulations in the use of Ammonium Nitrate.

STORAGE

Store in a dry, cool and well ventilated area. Keep away from food, drink and animal feeds. Keep away from incompatible materials. Do not blend or store in contact with urea. Dry urea and dry ammonium nitrate will react together to produce a slurry.

Section VIII. Exposure Controls / Personal Protection

ENGINEERING CONTROLS

Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, use ventilation to keep exposure to airborne contaminants below the exposure limit.

PERSONAL PROTECTION

The selection of personal protective equipment varies, depending upon conditions of use. Wear appropriate respiratory protection for dust/mist when ventilation is inadequate. A filtering face piece dust mask is recommended for most applications if respiratory protection is needed. Where skin and eye contact may occur as a result of brief periodic exposures, wear long sleeved clothing, coveralls, chemical resistant gloves, and safety glasses with side shields.

Wash hands thoroughly after handling product. Do not contaminate food products. Equipment used in handling the material must be thoroughly cleaned before repair or maintenance. Maintain a high standard of housekeeping in storage and processing areas.

PERSONAL PROTECTION IN CASE OF LARGE RELEASE

No additional information.

EXPOSURE LIMITS

U.S. OSHA PEL: 5mg/m3 as particulate not otherwise regulated. Permissible exposures may vary from jurisdiction to jurisdiction. Consult local authorities for acceptable exposure limits in your area.

Section IX. Physical and Chemical Properties

PHYSICAL STATE AND APPEARANCE

White spherical grain

MOLECULAR WEIGHT

Not applicable.

COLOR

White

pH (10% SOLN/WATER)

4.0-6.0

ODOR

Odorless

BOILING POINT

Decomposes.

ODOR THRESHOLD

Not applicable.

MELTING POINT

170°C (338°F)

TASTE

Disagreeable. Acrid. Strong.

CRITICAL TEMPERATURE

Not applicable.

VOLATILITY

Not applicable.

SPECIFIC GRAVITY g/cc

1.26 @70° F (Water = 1)

SOLUBILITY

Easily soluble in cold water, hot water.

### Section XI. Toxicological Information

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>SIGNIFICANT ROUTES OF EXPOSURE</strong></td>
<td>Ingestion. Inhalation. Skin contact.</td>
</tr>
<tr>
<td><strong>SPECIAL REMARKS ON TOXICITY TO ANIMALS</strong></td>
<td>Toxic to livestock, wildlife, and domestic animals if directly ingested. Ensure that all spillage is cleaned up and that top dressing on pasture lands is applied uniformly. Allow 2 - 4 days to pass after application before returning livestock to pasture. The product itself and its products of degradation are not harmful under normal conditions of careful and responsible use.</td>
</tr>
<tr>
<td><strong>OTHER EFFECTS ON HUMANS</strong></td>
<td>Recent studies undertaken by the U.S. Government using Canadian and American databases have determined that ammonium nitrate fertilizer does not demonstrate any risk of gastrointestinal cancer.</td>
</tr>
<tr>
<td><strong>INHALATION</strong></td>
<td>Ammonium Nitrate is an irritant substance and inhalation of vapor or dust can be expected to cause irritation of the respiratory passages. It is considered unlikely that absorption of a sufficient quantity of the compound to cause general poisoning could occur by this route if personnel are adequately protected in dusty conditions.</td>
</tr>
<tr>
<td><strong>SKIN CONTACT</strong></td>
<td>Ammonium Nitrate may cause itching and other signs of irritation, delays healing and may cause ulceration. Occasionally, individuals may exhibit sensitivity to Ammonium Nitrate and may develop an urticarial rash.</td>
</tr>
<tr>
<td><strong>EYE CONTACT</strong></td>
<td>Ammonium Nitrate dust or strong solutions of the salt cause eye irritation.</td>
</tr>
<tr>
<td><strong>INGESTION</strong></td>
<td>Relatively large amounts of Ammonium Nitrate must be ingested to produce toxic effects. In humans, 6 to 12 grams daily in divided doses may cause nausea and vomiting, acidosis, and in some individuals, methemoglobin formation.</td>
</tr>
<tr>
<td><strong>SPECIAL REMARKS ON CHRONIC EFFECTS ON HUMANS</strong></td>
<td>Exposure can cause headache, stomach pains, vomiting and diarrhea. Produces methemoglobin which reduces oxygen supply in the circulating blood. Although predominantly affecting infants, nitrate induced methemoglobinemia has also been documented in adults.</td>
</tr>
<tr>
<td><strong>SPECIAL REMARKS ON OTHER EFFECTS ON HUMANS</strong></td>
<td>No additional remark.</td>
</tr>
</tbody>
</table>

### Section XII. Ecological Information

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ECOTOXICITY</strong></td>
<td>Non-persistent. Non-cumulative when applied using normal agricultural practices. Low toxicity for humans or animals under normal conditions of use. May be harmful to livestock and wildlife if ingested. Clean up all spilled material, especially where bulk fertilizer loading of equipment occurs to prevent animal exposure. Aquatic/Marine Toxicity: Will release ammonium ions. Ammonia is a toxic hazard to fish. Avoid spills or release to watercourses. Will disperse with current. Release to watercourses may cause effects down stream from the point of release. U.S. D.O.T.: This material NOT listed as a Marine pollutant.</td>
</tr>
<tr>

Section XIII. Disposal Considerations

WASTE DISPOSAL OR RECYCLING

Recycle to process, if possible. Recover and place material in a suitable container for intended use or disposal. Ensure disposal complies with government requirements and local regulations.

Section XIV. Transport Information

DOT / TDG CLASSIFICATION

DOT/TDG CLASS 5.1: Oxidizing substance.

PIN and Shipping Name

Proper shipping name: Ammonium nitrate

PIN #: UN1942

SPECIAL PROVISIONS FOR TRANSPORT

U.S. DOT: A1, A29, 188, IP3

National Fire Protection Association (U.S.A.)

Hazards presented under acute emergency conditions only:

- Health
- Reactivity
- Specific Hazard
